Specification Document

SL-2200[©] CD/DVD Sleever

Bronway's, *all NEW*, SL-2200 CD/DVD sleever has been designed to address the growing demand for mid to high-end automated sleeving solutions.

The SL-2200 offers a significant cost performance alternative over other sleeves currently available on the market. Its unique modular design allows you to choose from the full range of optional extra stations as and when you need them.

The SL-2200 is capable of handling a wide variety of sleeve types for 120mm (and optionally 80mm & business card) CDs at rates of up to 75 sleeves per minute. Sleeve types include Card, Paper (with/without flap), Polypropylene (with/without flap), Tyvek and Safety Sleeve.

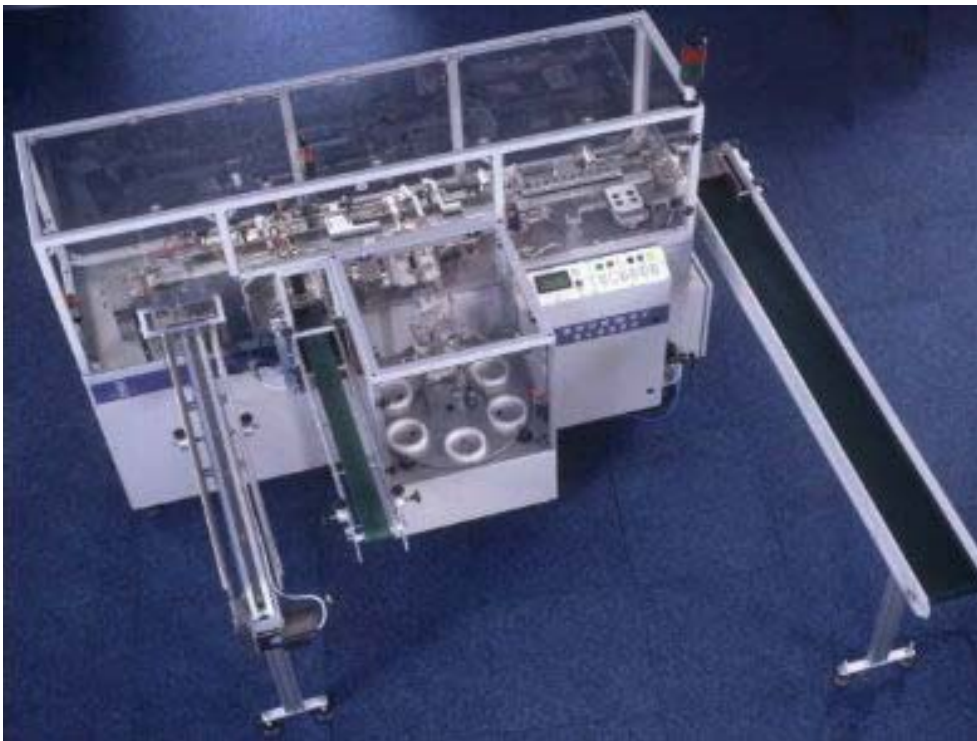

Unlike its competitors, the Bronway SL-2200 has an entirely modular design meaning you get exactly what you need as you need it. Further additional stations can be added on-site within hours so that your sleever simply develops as your demands change.

A key advantage of the SL-2200 is its innovative user-friendly design. The machine operators require minimal training; non-technical personnel can operate the SL-2200 with the set-up and product changeover being accomplished in minutes, not hours.

FEATURES

- Multi-sleeve handling: Card, Paper (with or without flap fold), Polypropylene (with or without flap tuck), Tyvek and Safety Sleeve. Bronway can quickly validate other sleeve types upon request.
